🐼 ChillyBwoy

Summary

Software Engineer with 15+ years of experience designing and building large-scale web platforms and developer tooling. Specializes in **TypeScript** and **Python**, architecture, and building maintainable high-performance systems. Experienced in developing shared platforms, improving engineering workflows across teams, and exploring **LLM**-based interfaces for natural-language interaction with complex systems.

Skills

Languages	TypeScript, Python, Elixir
Frontend	Vue.js, React, Nuxt.js, Next.js
Backend	FastAPI, Phoenix, Node.js, Django
Data & Infra	PostgreSQL, Docker, REST, GraphQL
AI/ML	LLM, RAG, embeddings, tool-calling

Work Experience

Nov 2023 – Present **Senior Application Engineer, RESTAR Inc.**, Tokyo, Japan, Full-time
Developing and maintaining a critical B2B platform with a focus on scalability, performance, and long-term maintainability.

- Researching and prototyping integration of **LLMs**, **RAG** pipelines, and tool-calling capabilities to improve information retrieval and enable natural-language interaction with internal systems through an AI-powered chat interface.
- Led migration of the core multi-source search system to a new architecture, improving scalability and maintainability.
- Designed and implemented an open-source **i18n** solution to quickly provide and easily maintain frontend localization.
- Introduced a standardized localization workflow that simplified translation management and reduced integration overhead.

Sep 2022 – Nov 2023 **Frontend Engineer (UI/UX), Rakuten**, Tokyo, Japan, Full-time
Developed user interfaces for the **Rakuten GORA** platform.

- Maintained and improved a large-scale frontend platform with high traffic and complex data flows.
- Improved internal engineering workflows and team collaboration processes.
- Designed and implemented internal tooling to analyze repository activity and provide insights into engineering productivity.

Apr 2020 – Jun 2022 **Head of B2B2C Frontend Engineering, SberDevices**, Moscow, Russia, Full-time
Led frontend engineering for smart device interfaces powered by the company's voice assistant platform (**SberBox**, **SberPortal**).

- Led development of platform-level frontend architecture for smart device ecosystems.
- Architected and implemented a shared **Open-RPC client library** used across multiple frontend services.
- Designed an internationalization framework adopted across several frontend projects.
- Initiated and led development of a reusable **component library** adopted by multiple product teams.

- Jul 2018 – Apr 2020 **Senior Frontend Developer**, *SuperJob*, Moscow, Russia, Full-time
Developed and maintained web and mobile applications for the SuperJob platform.
- Designed and implemented internal frontend tooling and shared libraries that improved development workflows and reduced code duplication.
 - Introduced **Flow** static type checking across multiple frontend packages, improving code reliability.
 - Implemented **visual regression testing**, significantly improving UI stability.
- Oct 2016 – Jul 2018 **Software Architect**, *VK (formerly Mail.ru)*, Moscow, Russia, Full-time
Designed internal tools and frameworks for Mail.ru Media Projects.
- Designed and implemented a **TypeScript**-based frontend framework used across multiple internal projects.
 - Designed a local development and debugging environment that significantly improved developer productivity.
 - Developed monitoring tools for detecting and analyzing critical errors in high-load systems.
- Dec 2014 – Oct 2016 **Frontend Developer**, *VK (formerly Mail.ru)*, Moscow, Russia
Maintained and expanded frontend architecture for Mail.ru Media Projects.
- Worked on high-traffic products including **news.mail.ru**, **auto.mail.ru**, **hi-tech.mail.ru**, **realty.mail.ru**.
 - Designed a Chrome push notification infrastructure to improve user engagement.
 - Contributed to a shared **design system** used across multiple media products.
- Oct 2008 – Dec 2014 **Software Developer**, *Kitty Hug*, Moscow, Russia, Full-time
Developed full-stack web applications for commercial and media projects.
- Developed full-stack applications using **Django**, **Tornado**, **React**, **MySQL**, and **jQuery**.
 - Delivered e-commerce platforms and content-driven websites for multiple clients.
 - Integrated payment and reservation systems supporting online transactions.

Education

- 2002 – 2007 **Engineering, Computer and Automated Systems Software (230105)**, *South-West State University (formerly Kursk State Technical University)*, Master's degree, Kursk, Russia
